Anonymous Grading: **no**

Unlimited Attempts Allowed

⌄ Details

Required length: 600 words*

* **wordstopages.com (http://wordstopages.com/)**

Choose and read *one* of the two following articles:

1. **Design is dead. And we have killed it. (https://canvas.colum.edu/courses/35536/files/5807401?wrap=1)** ↓ **(https://canvas.colum.edu/courses/35536/files/5807401/download?download_frd=1)** [PDF] — a reflection on how AI might threaten the roles of designers

2. **Stop Talking to Each Other and Start Buying Things** ↪ **(https://catvalente.substack.com/p/stop-talking-to-each-other-and-start)** — an angry, profane rant about the decay of personal spaces on the web

Write a personal response/rebuttal the author's perspective, and include specific references to ideas in the writing.

Publishing

Instead of turning this paper in as a .doc or .pdf, you will create a webpage (with CSS formatting) that will be zipped up and uploaded to Canvas.

HTML

1. Begin with a properly-formatted HTML template (such as **website-template.zip (https://canvas.colum.edu/courses/35536/files/5807406?wrap=1)** ↓ **(https://canvas.colum.edu/courses/35536/files/5807406/download?download_frd=1)**).
2. Create a document title inside of your <title>.
3. Paste all of your text in-between <div> container (you can use <article> if you prefer).

4. For the body, use the following formatting:

<header>
  <h1>...*your title...*</h1>
  <h2>...*your name and date...*</h2>
</header>
<main>
  ...your writing here, with proper paragraph formatting...
</main>
<footer>
  ...*copyright info: use* &#169; *or* &copy; *for the copyright symbol...*
</footer>

5. If you need italics, use <em>.
6. If you need boldfacing, use <strong>.
7. **Beware of character mis-encoding** if your writing is copied from a word processor! Quotations and apostrophes are the usual suspects.

CSS

Use the following CSS page formatting:

- Controlled width for your container: at mobile size, allow a little bit of left/right margin space for reading; beyond 1024px width you should control the container width.
- Font-family
- Text and background colors
- A unique appearance for your <header> and <footer>

Other than simple controls to the content width, you don't have to do much with your CSS media queries with this assignments (we'll save that for Assignments 2 and 3).
