⌄ Details

Create a one-page site that undergoes **a complete personality change** as the user interacts with it. Changes *could* include:

- Professional to anti-professional, or vice versa
- Sweet to frightening, or vice versa
- Contemporary to outdated, or vice versa
- *Etc.*

Unfinished to finished (or vice versa) will not be allowed! Each state of your webpage must involve aesthetic attention with CSS.

Required page components:

1. Header title
2. Main image (the image must be your own)
3. At least one good, solid paragraph of your own writing
4. Basic CSS layout controls, and font and color control

What will change on the page *(at the very least)*:

1. The background
2. The color scheme of foreground elements
3. The font-family
4. The main title (or a part thereof)
5. Some of your main text (not *all* of it)

The jQuery/JS triggers can be buttons (with a semantic <button>), <a> links, clickable images, or other elements bound with a .click() or .hover() function. You can decide whether one interaction enacts the entire makeover, or if the makeover occurs through a *succession* of interactions.

@font-face

Either the initial font, or the post-interaction font, must employ CSS @font-face -- using a font-file stored within your assignment5/ folder.

You are able to download font-files from Google Fonts, or you can try an alternate source like **Font Squirrel** ➡ **(https://www.fontsquirrel.com/)** .

This assignment does not have to be responsive. You can design strictly for the desktop experience.

What I am looking for

1. Correct, semantic HTML formatting (as always)
2. Aesthetic attention with CSS
3. Functional jQuery/JS
4. Functional implementation of a font file with @font-face

You are unable to submit to this assignment as your enrollment in this course has been concluded.
